

## **BP's Sustainability Report 2016 outlines how it is helping to drive the transition to a lower carbon future**

The energy BP produces serves to power economic growth and lift people out of poverty. In the future, the way heat, light and mobility are delivered will change. BP is anchoring its business in these changing patterns of demand for a secure, affordable and sustainable energy future.

Sustainability is at the heart of BP's strategy - which integrates the ambition to be a safe, strong, successful business with the aspiration to be part of the solution to climate change.

Find out what this looks like in practice in BP's Sustainability Report 2016, which shows how BP is:

- Supplying natural gas while taking action to reduce methane emissions.
- Operating the largest renewable energy business among oil and gas peers.
- Supporting and investing in technological innovation on low carbon solutions.
- Improving energy efficiency and working to reduce flaring.
- Helping its customers to reduce their carbon footprint by providing more energy efficient products.
- Working with governments to support the implementation of carbon pricing to help reduce emissions at a larger scale.

The report also demonstrates how BP is focusing on safe operations, respecting human rights and maximizing value to society.
