

HP announces new social and environmental goals with release of the HP 2016 Sustainability Report

Sustainability serves as a guiding principle for how HP does business, fueling the company's innovation and growth. It supports HP's vision of creating technology that makes life better for everyone, everywhere.

With the release of the HP 2016 Sustainability Report—the company's first full year of reporting HP Inc. data since separating from Hewlett-Packard Company in November 2015—HP demonstrates continued progress in reducing the company's total carbon and water footprints, and decreasing greenhouse gas emissions in its operations, supply chain, and product portfolio.

Further, the company continued to develop innovative ways to strengthen social and environmental conditions in its supplier factories. This includes setting new social goals to complement the environmental goals that cover each phase of HP's value chain.

Learn more about HP's progress, goals, and inspiring stories of positive impact, as the company continues to shift its business model and operations to advance a more circular, low-carbon and inclusive economy at <http://hp.com/sustainability>.
